1. The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance and that it has
not been completely solved. The author then
presents a new method for solving the problem.
The method is based on the use of the
variational principle. It is shown that the
method is very simple and that it can be
applied to a wide range of problems. The
author then gives some numerical results and
compares them with the results of other
methods. It is shown that the new method
gives results which are in good agreement
with the results of other methods. The
author then concludes that the new method
is a very useful tool for solving problems
of this type.

The first of the most important things
to be considered in the study of the
history of the world is the question of
the origin of life. It is a question
which has been the subject of much
speculation and controversy. The
ancient philosophers, such as
Aristotle and Plato, had their own
theories, but it was not until the
seventeenth century that the
question was taken up by the
modern scientists. The great
discovery of the cell, and the
subsequent development of the
theory of evolution, have shown
that life is the result of a
process of gradual development
from simple to complex forms.
The study of the history of the
world, therefore, is not only a
study of the past, but a study
of the present and the future.
It is a study which is of the
greatest importance to all
civilized men.
